

SolarPeak® NEWS

February 2015

A SolarPeak 180 tube DairySolar water heater **installed in 2012** has contributed 50 megawatt hours of power to help offset heating of 1400 litres per day to 85 degrees Celsius - saving the client thousands of dollars. A qualified solar design is the only way to get value on your solar investment. SolarPeak can help you with large solar hot water systems **Freephone 0508 468 928 Glenn Harvey**

The online screenshot of 20 February 2015 above shows elements off at mid day and already the 2 tanks are over 60 degrees Celsius heading towards the 85 Celsius required for bacterial wash compliance. This SolarPeak Dairy Solar system was installed and commissioned on 18 December 2012 and is proving an excellent investment ► all Dairy farms should aim to smash that shed power bill.

BUYER BEWARE Quality Grid tied solar power systems are an affordable investment buy only if the system design life exceeds the maintenance and replacement costs. Once the warranties dead what then?, who pays for the inverter if it fails after 5 years?

SolarPeak's 20 tube system has become a favourite replacement system for flat panel systems that have failed from frost and corrosion.

This simple and fast to install AP SolarPeak series model ensures value for money at an affordable price with excellent longevity and performance.

If your solar water heater has failed please contact us for a free appraisal and price to remove and replace with our premium SolarPeak technology. **FREEPHONE 0508 468 928**

SOLAR UPDATE

We are seeing solid enquiries again for solar water heating in the domestic market.

We have so many clients that get most if not all of their summer water heating free.

It seems more customers are starting to understand that Solar Water heating by PV is not really suited to medium and high volume hot water usage as a cost effective solution.

SPECIAL OFFER MARCH 2015!
